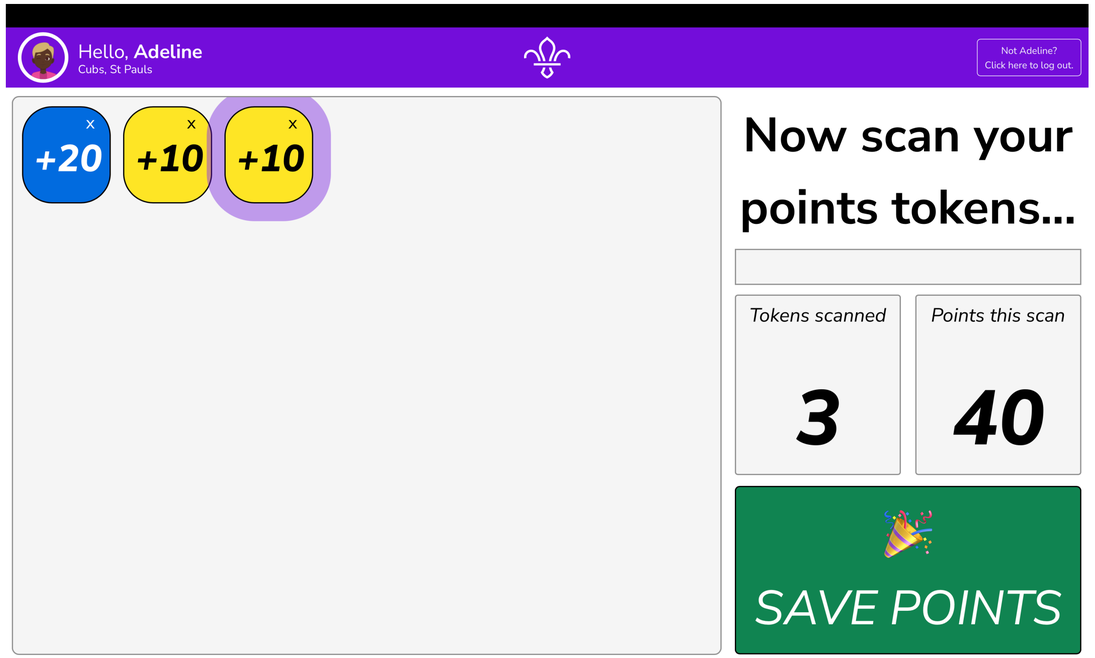
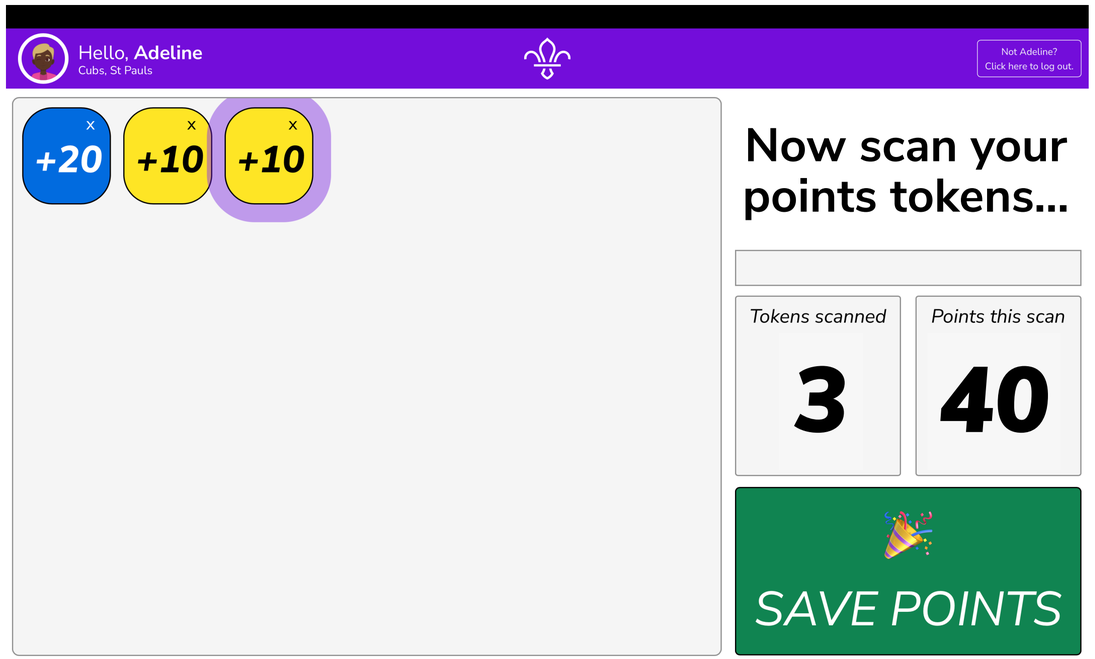
Change: reduce line height, and text area width a little for “scan your…”

Change: make the “Not Scanning…” box central height wise to menu header. so top, right and bottom border/padding are all equal. Not shown above.

Current



Ideal



Change: reduce line height, and text area width a little for “Now scan your…”
Change: Center the values of scaned tokens and points this scan
Change: LOVE the pulse animation, but rather than on last point scanned, can we change it to pulse behind the SAVE POINTS button? In a similar green, but pulse so it doesn’t cover the box above. If not, can we keep on the last points scaned, but reduce the pulse distance so it doesn’t overlap the menu bar/other points scanned box?

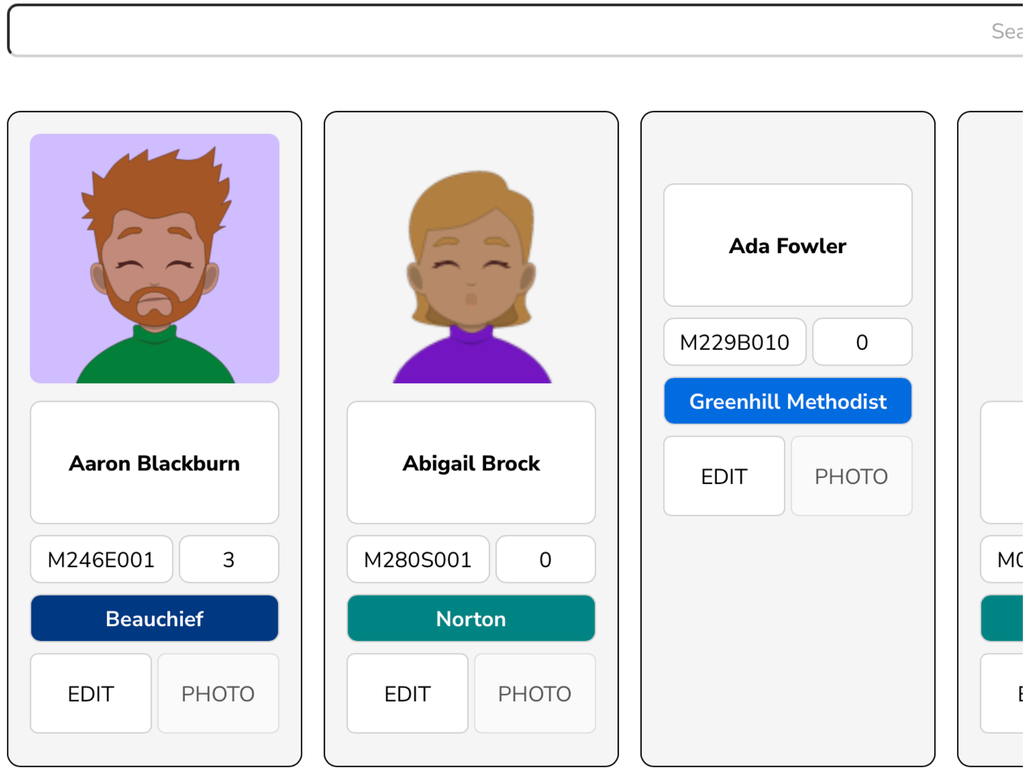
SORRY, realised I forgot all about this page. Is it possible just to increase the points box/text size so it matches the width of the text above. And just increase the font sizes of all a little please, same comparative to each other as now.

Also, probably too much work, but can we highlight somehow an activity base they haven't yet visited, or visited the least. Something like. "Why not give BASE a try?" A go, a try, another shot, another go (if done already, but now least visited). "Don't forget to try…" e.t.c

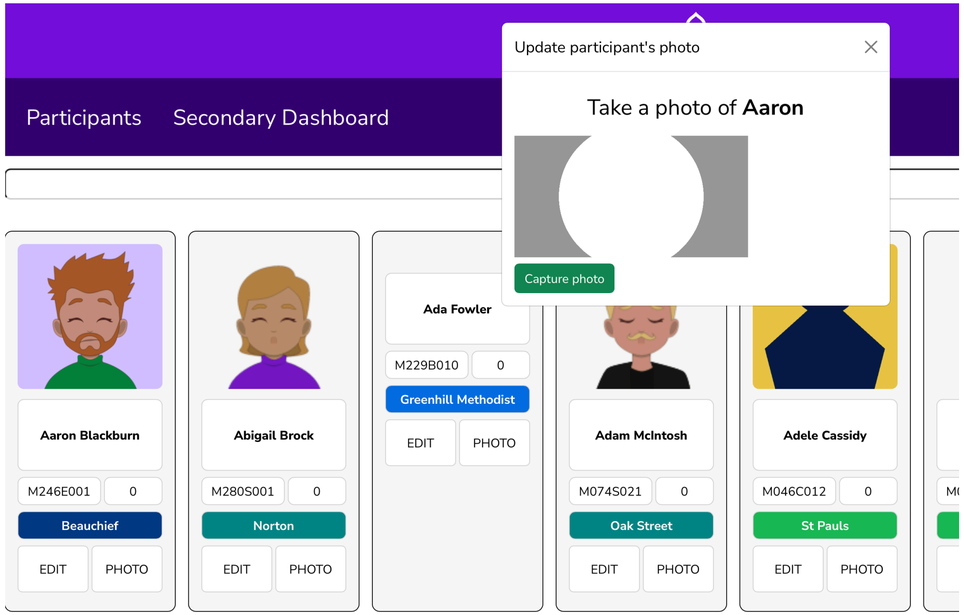
Current

No pin for members page. Only pin for edit details. Can we change this to members page as points/ details visible on this page.



Ideal

Add pin and set to 3642 to load this page and any functionality beyond it



When I change from USB Scanner to webcam, it won't load the webcam/camera despite camera being active and allowed on this page?

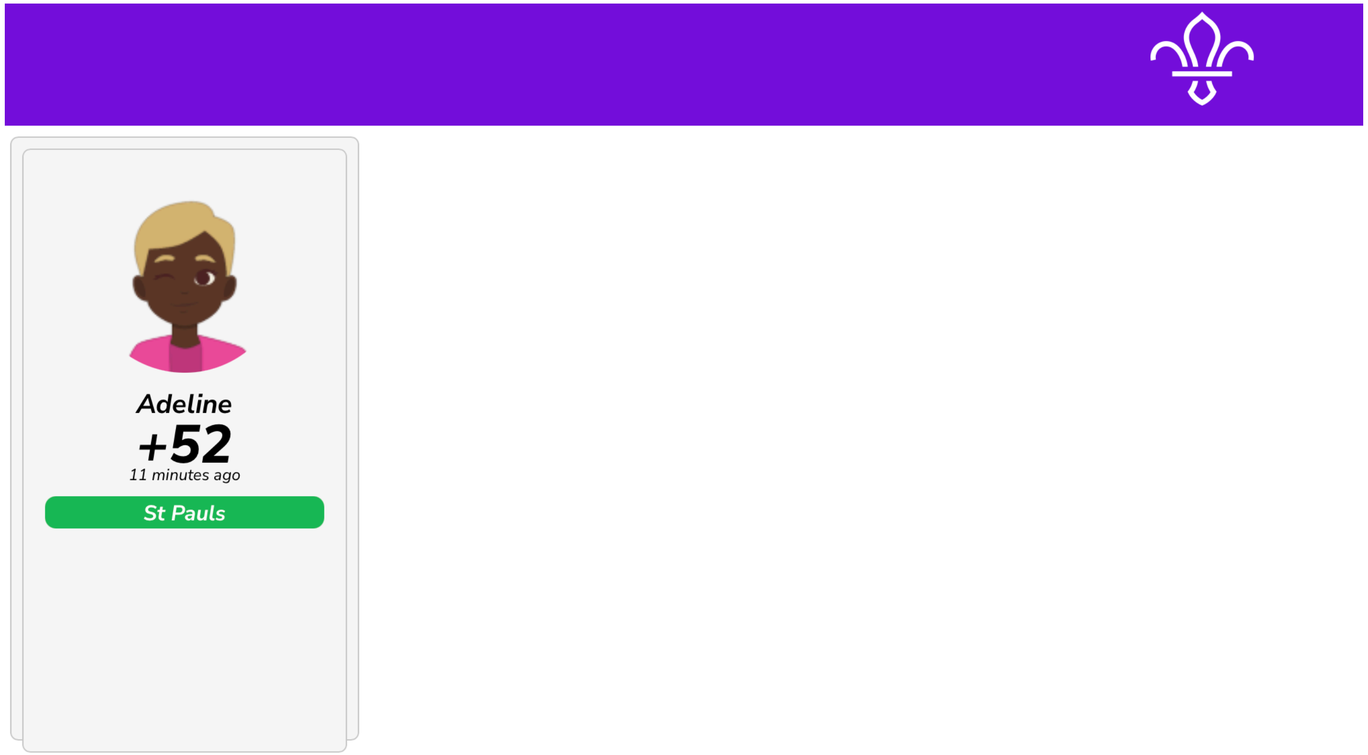
CHANGE: Can we put the whole take photo box centrally vertically, but aligned right on the screen. We use iPads for photos, so if we can get the capture photo button where the thumb is naturally when holding the iPad horizontally? This would save my thumb a lot of use 😂 And maybe darken/less saturate the background and drop shadow the take a photo box? Can we also have Firstname and Lastname in the “Take a photo of…”. Make camera preview box same height/width?

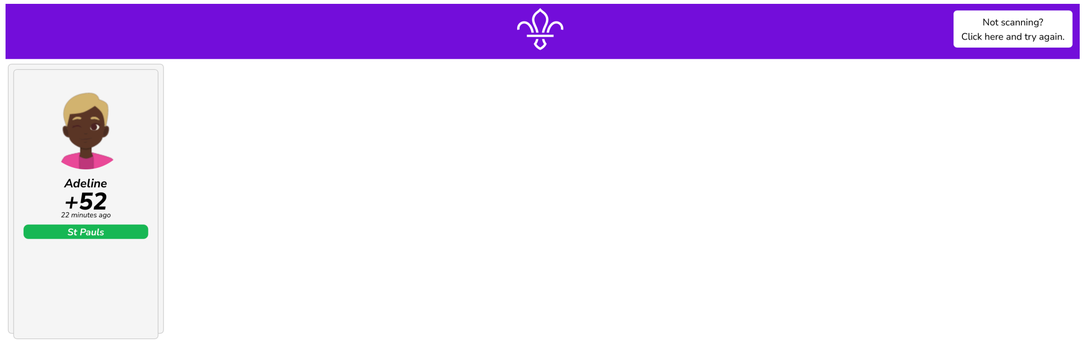
CHANGE: Can we centre horizontally all elements in the take photo box. Can we also make the capture photo button a lot bigger.



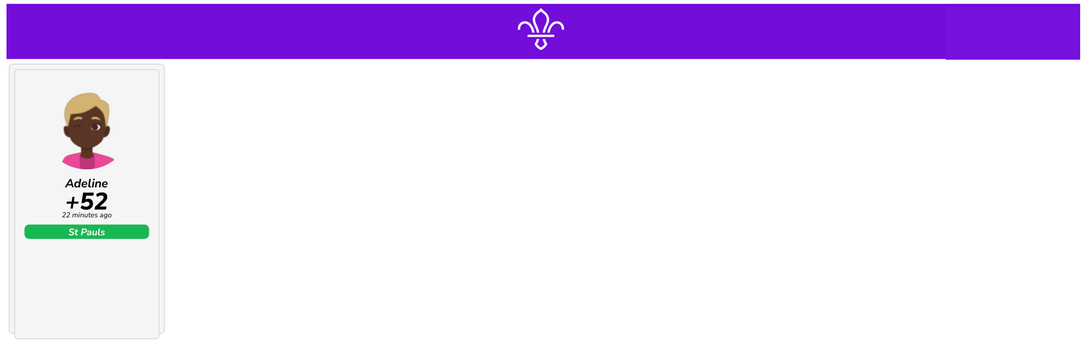
I’m getting a weird overlap on secondary dashboard of two latest scans.

Can we centre all data/photo to the card vertically?

Current



Ideal



CHANGE: Remove the “not scanning box” on the secondary dashboard.
